B. COURSE DESCRIPTION

Discuss individually the concepts, terminology and techniques of Evoked Potential (EP) recording with testing modalities of visual, auditory and somatosensory systems. An overview of computers and EP instrumentation will be discussed, as well as the application of EP testing in the operating room, and the computation and collection of normative data.

C. STUDENT LEARNING OUTCOMES

Describe the theoretical basis of evoked potentials; summarize the basis of EP waveform generation; identify artifacts on the EP; and summarize normative data for the comparison and evaluation of normal versus abnormal patterns

By the end of this course the student will be able to:

- Demonstrate understanding of basic computer applications to EP Technology
- Describe theoretical basis of evoked potentials
- Demonstrate the ability to perform evoked potentials in the modalities Visual, Auditory Brainstem, and Somatosensory studies
- Demonstrate knowledge of the theoretical basis of EP waveform generation
- Demonstrate knowledge of the anatomy and physiology of the related test procedures
- Identify and measure important data from EP waveforms
